Wireshark Exercises

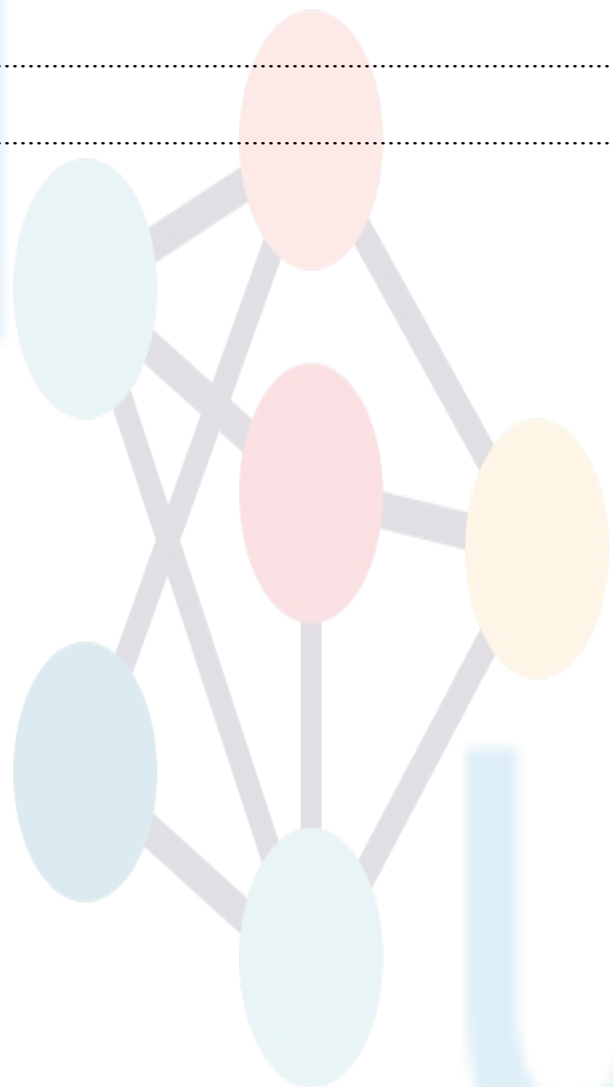

ALEXA ALPIZAR
MORA C20281

A practice with Wireshark Packet Analyzer

May, 2024

Table of Contents

I) Exercise One	3
II) Exercise Two	4
III) Exercise Three	6
IV) Exercise Four	7

I) Exercise One: Good old telnet

File: telnet.pcap

Work: reconstruct the telnet session

Questions

1. Who logged into 192.168.0.1?

Username: fake

Password: user

2. After logged what the user do?

Ping a 204.71.200.67(www.yahoo.com)

TIP: telnet traffic is not secure

II) Exercise two: massive TCP SYN

File: massivesyn1.pcap and massivesyn2.pcap

Work: Find files differences

Questions

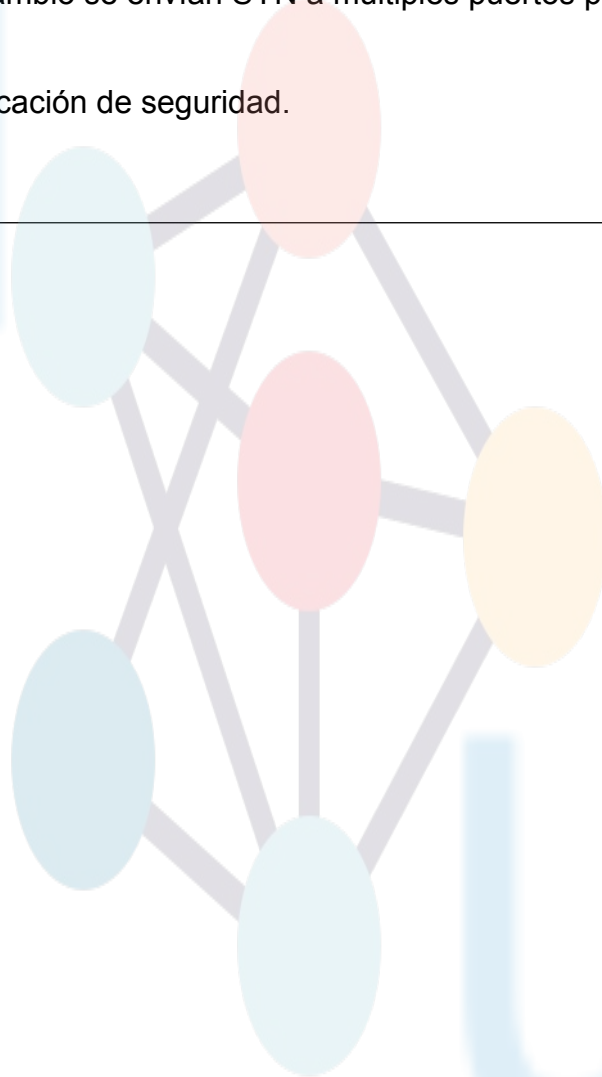

1. massivesyn1.pcap is a SYN flood attempt

1. massivesyn2.pcap is a port scan attempt TIP: pay

attention to source IP

R/ Para massivesyn1.pcap la IP es 10.100.25.14 y

se observa el envío de varios paquetes SYN a un solo destino, posiblemente un ataque interno. Por otra parte, massivesyn2.pcap tiene la IP 51.142.253.91 y en cambio se envían SYN a múltiples puertos para la verificación de seguridad.

III) Exercise three: compare traffic

Files: student1.pcap and student2.pcap

Scenario: You are an IT admin in UCR, you had reported that *student1* (a new student) cannot browse or mail with its laptop. After some research, *student2*, sitting next to *student1*, can browse with any problems.

Work: compare these two capture files and state why *student1*'s machine is not online

Solution

1. *student1* must verificar la configuración correcta de su puerta de enlace predeterminada, podría ser inválida o incorrecta.

TIP: pay attention to first ARP package

IV) Exercise four: chatty employees

File: chat.pcap

Work: compare these two capture files and state why *student1*'s machine is not online

Question

1. What kind of protocol is used?

Usa el protocolo Microsoft Notification Protocol (MSNP).

2. Who are the chatters?

Thomas y Brian.

3. What do they say about you (sysadmin)?

Ambos han escuchado que soy un idiota.

TIP: your chat can be monitored by network admin
